Memo #1141: Vendor 360 – System Enhancements

The Vendor360 application will be taken off-line **Sunday, February 16, 2014 at 6:00 AM EST** for system enhancements. The anticipated time of system unavailability will be from 6:00 AM EST to 10:00 AM EST. Ensure all work is saved prior to this time and log out of the MCS software.

Vendors who use 3rd party software are encouraged to make all appropriate parties aware of the changes.

Geocoding Photo Diagnostics Tool

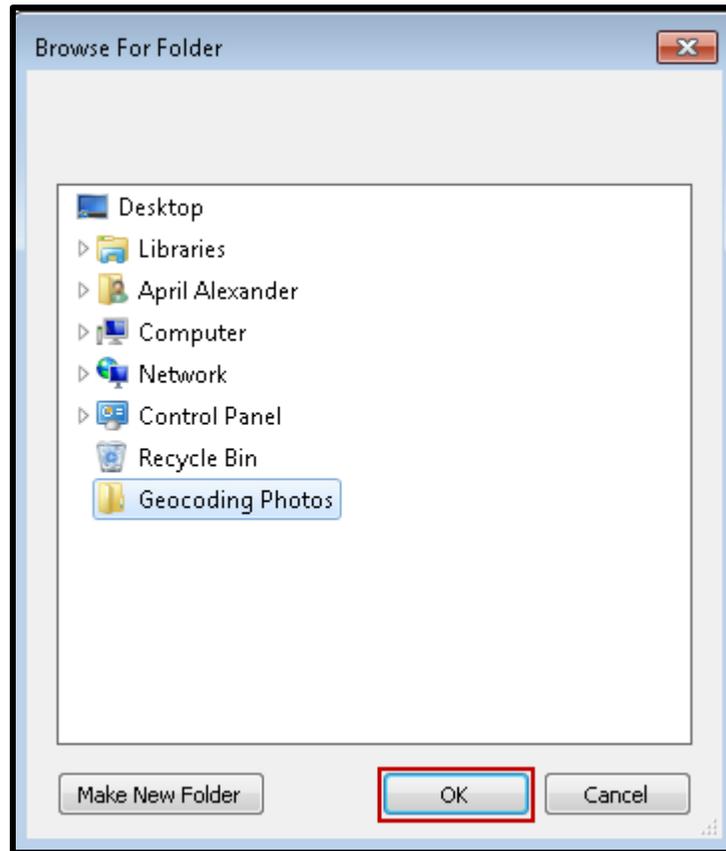

The geocoding photo diagnostic tool will allow photos to be uploaded and tested to ensure they contain EXIF data. The tool is available within Vendor 360 or on the Vendor 360 login screen. This tool is only to be used for testing purposes; photos that are uploaded will not be received by MCS.

Accessing the Tool

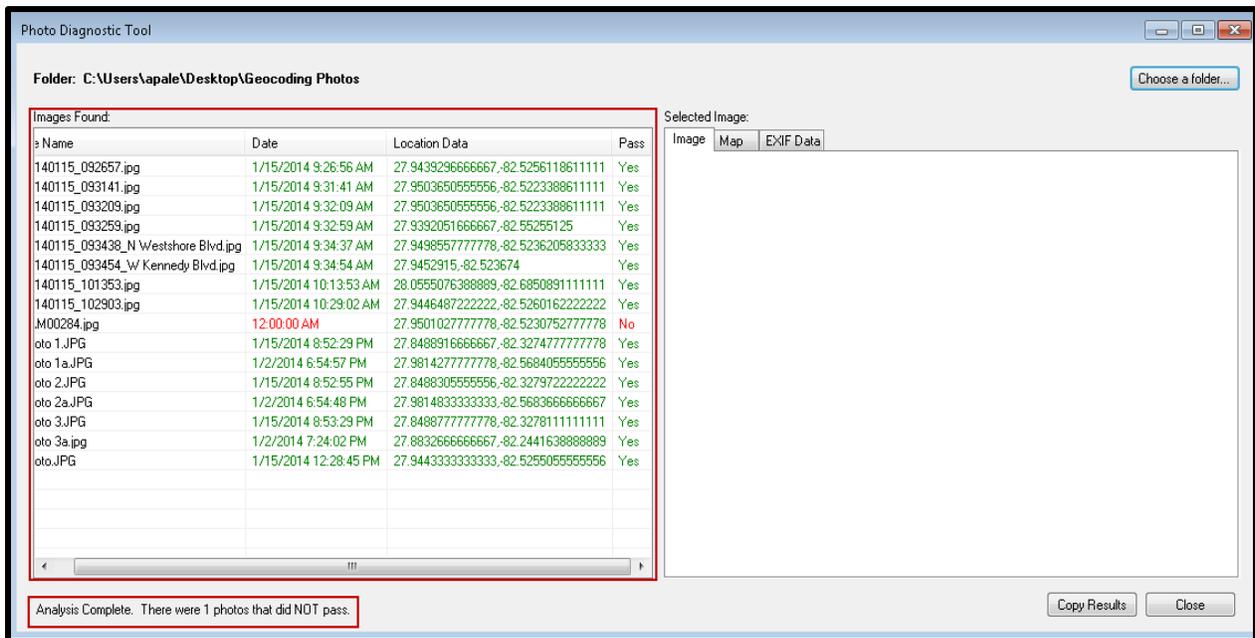

- From the Vendor 360 login page, click on “Photo Diagnostic Tool”
 - This is where photos can be tested if someone does not have a Vendor 360 login

- The “Browse For Folder” opens. Select the folder the pictures are located in and select “OK.”

- The photos will populate in the “Image Found” column with a summary of its analysis. The summary items listed in green passed; those in red failed. There is also an overall summary at the bottom of the tool.
 - File Name: Name of photo (how it is saved in the folder on your computer)
 - Date: Date in photo properties (keep in mind dates need to match completion or inspection dates, this tool just verifies that the date is set to a correct date and time)
 - Location Date: This column contains the geocoding information listed for the file
 - Pass: This tells you if the photo overall passes or not

- Selecting a photo will display detailed information for the photo in a tabbed interface. The three tabs will contain the following information:
 - Image: the selected image will be displayed
 - Map: a Google map with the geocoding coordinates of the photo marked
 - EXIF Data: A list of all the EXIF data present in the photo
